OBJECTIVES

Passionate software engineering student with a strong foundation in computer science fundamentals, problem-solving, and software development. Seeking an opportunity to contribute to building scalable and impactful software solutions while continuously learning, taking on challenging problems, and growing as a software engineer.

TECHNICAL SKILLS

Languages: Java, Python, C++, C, JavaScript, PHP

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, Computer Networks, System design basics, Microservices basics

Web & Backend: React, Node.js, FastAPI, HTML5, CSS3, REST API, JWT, CORS, HTTP Methods

Database: MySQL, MongoDB, Redis

DevOps & Tools: Git, GitHub, Docker, CI/CD Pipeline, Postman, Vercel, Render

PROJECTS

[View All](#) 🔗

AutoDocs – AI-Powered Repository Documentation Generator 🔗

May 2026 - Jun 2026

- Engineered a full-stack web application with a **FastAPI** backend and **React/Vite** frontend to automate codebase parsing and documentation generation.
- Integrated the **Groq API** (LLMs) to perform multi-tier code analysis, generating READMEs, module summaries, and function-level explanations.
- Designed an asynchronous pipeline with thread-safe job management and background workers to prevent memory leaks and optimize cloud resources.
- Implemented predictive repository scanning to manage **API** usage within strict TPM/RPM quotas and mitigate rate-limiting.
- Deployed a secure **CORS**-enabled client-server architecture across Vercel and Render with environment-driven **CI/CD** configuration.

CPU Scheduler Visualizer – Full Stack Web Application 🔗

Dec 2025 - Jan 2026

- Developed a CPU Scheduling Visualizer using **C++** for core algorithm logic, integrated with a **Node.js** server to bridge backend computation with frontend visualization via **REST**-style endpoints.
- Implemented major operating system scheduling algorithms and visualized process execution timelines with dynamic, real-time animations.
- Implemented a seamless data pipeline using **JSON** to exchange real-time scheduling data between the C++ backend and frontend.
- Deployed the application on Render with version control and collaborative workflow managed via **Git** and **GitHub**.

EDUCATION

Chandigarh University

Master of Computer Applications (MCA) - **CGPA - 7.84/10**

2025 – 2027

Mohali, Punjab

Gian Jyoti Institute of Management and Technology

Bachelor of Computer Applications (BCA) - **CGPA - 8.14/10**

2022 – 2025

Mohali, Punjab

Govt. Model Senior Secondary School, Sec 37-B

Class XII (CBSE) - **71.2%**

2021 – 2022

Chandigarh

Govt. Model High School, Sec 42-B

Class X (CBSE) - **70.6%**

2019 – 2020

Chandigarh

CERTIFICATIONS

- AI for Data Science – Infoys Springboard
- Hack Forge 2.0 Hackathon
- Full Stack Development Workshop – Techlive Solutions

HOBBIES & ACHIEVEMENTS

- Solved 100+ competitive programming problems across GeeksforGeeks and LeetCode.
- Awarded a merit-based academic scholarship for sustaining a consistent 7.5+ CGPA.
